Summary

Senior product designer with 9 years experience. At Xoxoday, **I lead design across the organisation** serving 8,000+ enterprise clients and 65M users. Built and grew a design org of **9-15 designers**, owned systems, brand, and product direction simultaneously, building the infrastructure of design.

Currently applying that thinking to **AI-native workflows**, enabling teams to ship features faster with fewer design to code gaps.

Experience

Jan 2019 – Present (~7 years)

Senior Product Designer — Xoxoday

End-to-end SaaS for rewards, incentives & loyalty · 8,000+ enterprise clients · 65M users · 55+ countries

Design Org Leadership

- Operated as the **senior-most design leader**, working directly with founders on product direction, team structure, and design quality across products
- Built and led a **team of 9–15 designers** across product and marketing, defining expectations around ownership, quality, and product thinking
- Established **design governance** across teams, standardising workflows, component ownership, and how design work is structured
- Defined design-to-engineering **quality processes**, improving how design translates into shipped product across teams

AI-Native Workflow

- Led the shift to an **AI-native product development workflow**, accelerating how features move from design to production
- **Structured the design system for AI consumption** with token–code mapping, component definitions, and validation rules, ensuring reliable outputs
- Transitioned teams from static handoffs to AI-assisted building on real product output, reducing iteration gaps

Design System

- **Sole custodian of the design system** across products, defining tokens, components, and governance to standardize product foundations
- Defined contribution models, ownership, and review processes, enabling the system to scale across teams
- Built a **shared foundation of tokens** and reusable components, improving reuse and reducing duplication across codebases
- Identified fragmentation and led the shift to a single unified system, bringing consistency across products and teams serving 4–5 products and **20–30 engineers**.

Core Product Design & Strategy

- Owned **end-to-end design of the admin platform**, shaping the core system for enterprise reward workflows
- Led design across sending, reporting, payments, onboarding, and storefront configuration, covering key product journeys
- Partnered with product and engineering on roadmap, tradeoffs, and platform direction, **influencing product decisions**
- Took features from **problem definition to production**, ensuring client and business needs translated into shipped product

Brand Unification

- Led brand unification across product, marketing, and web, **improving consistency in visual language** and experience

Jun 2017 – Dec 2018 (1 yr 7 mos)

UX/UI Designer — Gapoon

Home services marketplace · On-demand booking for home maintenance and repairs

- Owned end-to-end product design across user, vendor, and admin platforms, ensuring consistent user experiences
- Defined user flows, interaction patterns, and UI systems across web and mobile, improving usability and clarity

Mar 2017 – Jun 2017 (3 mos)

UX/UI Designer — Algebra Analytics

Restaurant tech platform · Analytics and operations tools for the food industry

Designed product experiences for a restaurant operations platform, improving usability through clear user flows and interactions

Expertise

B2B SaaS Admin Platforms · Enterprise UX · Platform & Product Strategy · Design Systems · Token Architecture · Design-Engineering Alignment · Design Operations · Team Governance · Design Org Leadership · Team Hiring & Mentoring · Brand Systems · Stakeholder Management · AI-Native Workflows

Education

2011 – 2015

BE, Electronics & Instrumentation Engineering

Sathyabama University, Chennai
